

# China Cyber Talks 2022

*China's Cyber and Digital Regulation: Between laws and geopolitics*

Since the enactment of the Chinese Cybersecurity Law in 2017, the Chinese state has developed an extensive regulatory framework on cybersecurity, data usage and data protection. Companies doing business in China and especially those generating data in China have to be compliant with these requirements.

Starting February 25, 2022, BDI offers over the course of 7 Fridays deep dive webtalks on China's cybersecurity regulation. We kick off this series with a webtalk that provides an overview of China's cybersecurity-related regulatory framework and the respective institutions. The following five weeks, our China Cyber Talks will each address one cybersecurity- or data-related regulatory act and its implications for industry. During the final session we will discuss the repercussions emanating from these laws for an organisation's IT system.

We are delighted to welcome speakers from Control Risks, Sinolytics and Zhong Lun Law Firm.
